

Burnet's™

Growing you the good life

Sowing Instructions

Soil Preparation

Spray off all weeds. Cultivate by hand or rotary hoe to a depth of 8cm (3 inches). Then use the **Heeling In** process to level. **Heeling In** finds all the soft spots. Use a sprinkling of Burnet's **Ezystart Lawn Starter** to feed & condition the soil and increase the microbial activity.

Sowing

Sow the seeds evenly at 30g/m². Split the bag and sow half North/South and the other half East/West. This saves you running short of seed. Lightly rake or cover seeds, and firm.

Watering

A new lawn must not dry out! Water twice daily until first cut. Our unique coating process will aid germination by keeping moisture around seeds. This allows for stronger root development.

Mowing

When the lawn is 5-6cm (2-3 inches) high, mow it only taking 1/3 of its height at a time. Then take another 1/3, gradually working down to the height required.

Maintenance

After 3 mowing's apply Burnet's **EzyFert Slow Release Lawn Food**. After 6 months, apply Burnet's **EzyGreen Extra**. This will remove moss that may have encroached the lawn in Winter months, and kills most broad leaf weeds during Spring & Autumn. Feed the lawn and keep the soil in good condition.
